

Gilvocarcin V

Code No.: **BIA-G1035**

Pack sizes: **0.5 mg, 2.5 mg**

Synonyms : Anandimycin A, Toromycin, 1072B

Specifications

CAS #	: 77879-90-4
Molecular Formula	: C ₂₇ H ₂₆ O ₉
Molecular Weight	: 494.5
Source	: <i>Streptomyces</i> sp.
Appearance	: Yellow crystals
Purity	: >95% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in DMF or DMSO. Moderately soluble in methanol or ethanol. Poor water solubility.

Application Notes

Gilvocarcin V is the major analogue of a complex of C-glycoside antitumor actives isolated from a *Streptomyces* sp. Gilvocarcin V contains a vinyl group in the 8-position, and is the most potent analogue of the complex. It is thought to act as an inhibitor of the catalytic activity of human topoisomerase II. The metabolite displays potent antibacterial, antifungal, antiviral and antitumor activity. Recent research suggests that the gilvocarcins act as photoactivated cross-linkers of DNA to histones.
