

epi-Ivermectin B1a

Code No.: **BIA-I1578**

Pack sizes: **1 mg, 5 mg**

Synonyms :

Specifications

CAS #	: Notlisted
Molecular Formula	: C ₄₈ H ₇₄ O ₁₄
Molecular Weight	: 875.1
Source	: Semi-synthetic
Appearance	: White solid
Purity	: >95% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in ethanol, methanol, DMF or DMSO.

Application Notes

epi-Ivermectin B1a is a base-catalysed intermediate in the decomposition of ivermectin. *epi*-Ivermectin B1a is formed by epimerisation at the 2-position which ultimately rearranges irreversibly to the isomeric alkene analogue, Δ^2 -ivermectin B1a. Despite the importance of ivermectin as an anthelmintic in animal health, there are no published reports of the biological activity or the levels of *epi*-ivermectin B1a in animals or the environment.
