

Leucomycin complex

Code No.: **BIA-L1551**

Pack sizes: **25 mg, 100 mg**

Synonyms : Kitasamycin A1, Turimycin H5, Leucomycin V 4-isovalerate

Specifications

CAS #	: 1392-21-8
Molecular Formula	: -
Molecular Weight	:
Source	: <i>Streptomyces kitoensis</i>
Appearance	: White to off-white solid
Purity	: >95% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in ethanol, methanol, DMF or DMSO. Limited water solubility.

Application Notes

Leucomycin complex (kitasamycin) is a family of closely related macrocyclic lactone antibiotics produced by *Streptomyces kitoensis*, discovered in 1953. The complex contained over 14 components with analogues A1, A4, A5, and A13 being the most abundant analogues. Leucomycin complex is used as an animal health product for control of Gram positive bacteria, Gram negative cocci, leptospira and mycoplasma.
